# HireHub | Sequence: Recruiter review and interview

Separate optional requests shown in one scenario; status update and interview scheduling are not a mandatory linear workflow.

Get_recruiter checks current active user, role and profile. Owned-post scoping is explicit for applicant/status/resume requests.
schedule_interview does not fully check application/internship/recruiter consistency or ownership; no extra guard is invented here.
Notifications are stored for the student to retrieve later; the code does not create or call an external meeting provider.
